

Concrete Admixture Accelerator

Concrete Admixture Accelerator are used for quicker setting times of concrete. It provides higher early strength development in freshly cast concrete.

Main uses of Accelerating Concrete Admixtures

Concrete Admixture Accelerator are suitable for concreting in winter conditions

During any emergency repair work

In case of early removal of formwork

Disadvantages of Accelerating Concrete Admixtures

- * It has increased drying shrinkage

- * Concrete Admixture Accelerator offers reduced resistance to sulphate attack

- * CaCl_2 high risk of corrosion of steel – not permitted in reinforced concrete

- * It is more expensive and less effective
